Kafka Integration Pega

In this chapter, we will be discussing about how to integrate Apache Kafka with Spark Streaming API. 3 1 and we are trying a POC to integrate with KafKa using the Pega OOTB capability. Stream service is not enabled Enable it via the Stream Services landing page Hi, We are using Pega 7.. I understand that we can use this OOTB feature to subscribe to the KafKa topic but can we use the OOTB feature to publish a topic to the Kafka queue.. About SparkSpark Streaming API enables scalable, high-throughput, fault-tolerant stream processing of live data streams.

2)Started Zookeeper and kafka servers 3)created a topic 4)in pega created kafka configuration instance -did not give SASL authentication.. 5)created a kafka dataset 6)created a dataflow 7)created a real-time dataflow, after that in dataflow run it says.. Finally, processed data can be pushed out to filesystems, databases, and live dashboards.. Data can be ingested from many sources like Kafka, Flume, Twitter, etc , and can be processed using complex algorithms such as high-level functions like map, reduce, join and window.. Also it will be great if i can get a sample implementation of Kafka integration to subscribe a topic.. Each dataset in RDD is divided into logical partitions, which may be computed on different nodes of the cluster.. Resilient Distributed Datasets (RDD) is a fundamental data structure of Spark It is an immutable distributed collection of objects.
